

2005-2009 Tail Light Trim

Before beginning, thoroughly clean the tail light lens to make sure they are free of any dirt or contaminants.

To ensure a strong bond, please make sure you use the alcohol prep pads and 3M Adhesion Promoter as illustrated in the instructions.

2

Apply the included 3M Adhesion Promoter to the same areas cleaned in Step 1. Only prep the very outside edges of the lenses where the adhesive will attach, there is no need to wipe down the entire lens.

4

Starting with the upper inner corner, apply the trim to the tail light lens as shown below. Make sure there is proper clearance between the trim and decklid panel in the upper corner of the tail light.

1

Using the supplied alcohol prep pads, thoroughly clean the outside edges of the three lenses where the adhesive will attach.

3

Peel the backing from the 3M Adhesive as shown.

5

Once the trim is properly located over the tail light lens, push down firmly on all areas of the trim to fully seat the adhesive. Repeat Steps 1-5 for opposite side trim to complete the installation.
