

2005-2014 Mustang GT / GT500 / V6

1-Piece CV Driveshaft

Not checking this will void the warranty:

EXTREMELY IMPORTANT

Please Note: Vehicles with a live rear axle (2005-2014 Mustang) must be checked with the rear suspension set at ride height. The included 6-bolt CV adapter plate MUST be installed onto the factory differential flange before the driveshaft can be installed. This is not an optional part, nor is it a spacer as the bolt pattern on the DSS CV and the factory differential flange are not the same. If you are using aftermarket adjustable control arms and/or relocation brackets, (not needed with a CV driveshaft) the CV clearance may be affected. You may need to adjust these if the CV gap is not within the above dimension.

Hardware Torque:

2005-2010 GT / 2007-2012 GT500: (12) M10 Bolts 57 ft-lbs / Re-use (4) factory bolts at trans-torque to OE spec
2011-2014 GT: (4) M12 Bolts 70 ft-lbs / (12) M10 Bolts 57 ft-lbs
2005-2014 V6: (18) M10 Bolts 57 ft-lbs / Re-use (4) factory bolts at trans-torque to OE spec
2013+ GT500: (24) M10 Bolts 57 ft-lbs
