

Gripp Performance Rear Upper Control Arms

INSTALLATION INSTRUCTIONS

Step 1 Carefully place the rear of vehicle on jack stands located at the frame – not the rear axle.

! CAUTION!

Use extreme caution when working under vehicle

- **Step 2** Using a hydraulic floor jack, raise the rear axle housing under the center section until the axle reaches approximate ride height. Place jack stands under the axle for safety.
- **Step 3** Working on one side at a time, remove upper control arm by removing two bolts securing it to the chassis and rearend housing. Apply a liberal coating of general purpose grease on the new control arm bushings. With grease Zerk facing the ground reinstall and tighten control arm completely, using a drop of Loc-Tite™ on each mounting bolt.
- **Step 4** Follow the same procedure for the other side.
- **Step 5** You may now lube both grease fittings and reinstall dust caps.
- **Step 6** Drive the car for approximately 5-10 miles, recheck all nuts and bolts for proper torque specs.
